HIGHLY EFFECTIVE BIODEGRADABLE CLEANER

This biodegradable and food-grade liquid degreaser/cleaner is ideal for heavily contaminated surfaces, pumps, pipes, and floors. It effectively removes vegetable or synthetic oil and can be applied using high-pressure cleaners, sprayers, or manually. It works efficiently with both hot and cold water. This product has various applications depending on the level of soil and the cleaning method used. For high-pressure cleaning, a solution of 5-10% v/v should be made, with the spray head and water temperature measured accurately for optimal results (+/- 0.5% and +/- 50°C, respectively). For heavily soiled surfaces, a solution of 10-20% in water should be used and sprayed before rinsing with high pressure. For slightly soiled surfaces, a solution of 5-10% v/v in water is recommended, with the same cleaning and rinsing method. For manual cleaning, a solution of 10-20% depending on the degree of soil should be made and applied to the surface with a sponge or brush, followed by a thorough rinse. This product can also be used in detergent tanks, such as those used by fire brigades, and does not harm

materials. Pump concentration should be set to 3 or 6.

PROPERTY	METHOD	VALUE
pH @ 10%		10.3
Flash point, °C		None
Biodegradability		>95%
Toxicity		None

CATEGORY

- Cleaners

BENEFITS

- Highly effective in use
- Can be diluted
- Non-toxic
- Biodegradable
- User friendly
- Non-flammable
