DYADE
LUBRICANTS

HIGH PERFORMANCE FOODGRADE UNIVERSAL HIGH TEMPERATURE FLUID

This product is a biodegradable lubricant that is based on highly polar ester base oil and is specifically formulated to resist oxidation, providing a long wet film life at high temperatures. This product is fortified with hBN (Hexagonal Boron Nitride), which acts as a solid lubricant, offering superior anti-wear properties and increased lubrication at temperatures exceeding 300°C. The highly polar molecules in this product form strong bonds with surfaces and can withstand high temperatures while maintaining a highly viscous lubricating film, which separates moving parts. When the ester base oil stops lubricating, hBN provides boundary lubrication. This product is a versatile lubricant that can be used for any moving part in various industries, including food, cosmetics, pharmaceuticals, textiles, glass, steel, and wood. This product is suitable for applications such as conveyor chains, slides, bearings that run continuously at high temperatures, textile stenters, drying machines, bakery ovens, and paint stove chains. With its exceptional anti-

wear capacity, Foodmax Extreme can significantly reduce wear on chains, making it a superior choice over other lubricants.
