DYADE
LUBRICANTS

SPRAYABLE FOODGRADE GREASE

Aiming to provide optimal lubrication and protection for seals, guides, bearings, blades, and other machinery parts that come into direct contact with food, this product is a non-toxic spray lubricant specially formulated for use in food and pharmaceutical environments. This product has been developed for use on various food processing equipment, such as mixers, slicers, mincers, and seals, where it's impossible to avoid contact with food. Additionally, it's an ideal release agent for grills, ovens, loaf pans, boning benches, chopping boards, and other hard surfaces that frequently come into contact with foodstuffs, preventing them from sticking during processing.
