DYADE
LUBRICANTS

FOODGRADE SILICONE FLUID

This product is a silicone-based fluid that provides excellent high-temperature resistance. It is primarily used as an anti-adherent and lubricant in food processing equipment where incidental contact with food may occur. It is perfect for use on packaging transport lines and low load applications. Additionally, it serves as an effective anti-adherent for all types of equipment, demolding plastics and rubbers, and surface polishing. This product is a specially formulated lubricant designed for applications that are exposed to high temperatures and various contaminants, including water. It has an impressive working temperature range of -60°C to 200°C, making it ideal for use in extreme conditions.
