LUBRICANTS

SEMI DRY FOODGRADE LUBRICANT CONTAINING PTFE

This product is a semi-dry lubricant that is clean, non-toxic and does not stain. It is based on PTFE and provides excellent low friction properties while reducing static. This water repellent lubricant is ideal for use in applications that involve repetitive movements and require a non-sticky lubricant. Upon application, it forms a solid and durable lubricating film that does not attract dust or other fine particles. This makes it particularly useful in dusty environments where moving parts require long-lasting and low-maintenance lubrication. The product can be used in a temperature range of -20°C to 120°C. This lubricant is ideal for industries such as food, chemical, and printing that require a clean lubrication solution.
