

ENGINE CLEAN

ENGINE CLEANER - USE BEFORE OIL CHANGES

322800101

ENGINE CLEANER - USE BEFORE OIL CHANGE

This product is a highly concentrated additive that cleans the engines, hydraulic systems, gearboxes and differentials. It is often expressed as "Engine Flush". The main purpose of this concentrated product is ensuring that after an oil drain, the new oil is not contaminated with the old deposits. Therefore this product cleans the complete system and gets rid of all varnish, neutralizes acids and dissolves deposits before the oil drain. Also this product quiets noisy hydraulic valve lifters by removing the deposits. This product is compatible with all mineral, semi-synthetic and full synthetic engine oils. It is also applied for non-automatic gearboxes and differentials.

HOW TO USE?

It is advised to use the Dyade Lubricants Engine Clean before the oil drain and while the engine is warm. Let idle without load for 20 minutes. Then drain the crankcase, change the oil filter and the oil. For engine purposes, 1 bottle of 300ml engine clean will treat up to 5 liters of oil. For manual transmissions and differentials it is advised to add a maximum of 4.5% - 5% to the oil. After adding the Dyade Lubricants Engine Clean, drive for a few hours and then drain the lubricant.

PRODUCT SPECIFICATIONS ENGINE CLEAN

Product information

"People buy this product because they need a high-quality engine flush"

CATEGORY

Car additive Engine Clean

MAIN BENEFITS

- Extreme engine cleaner
- Cleans engines, hydraulic systems, gearboxes and differentials
- Eliminates sludge, deposits and neutralizes acids

AVAILABLE PACKAGING

300 ML
