MULTIPURPOSE CALCIUM GREASE

The calcium soap thickened grease we offer is of premium quality and provides exceptional protection against rust and corrosion, making it particularly suitable for use in wet and corrosive environments. The grease is formulated with anti-wear and oxidation-resistance additives that ensure prolonged service life. Its tacky consistency provides excellent adhesion to metallic surfaces, while its high dropping point guarantees that it remains in place even at high temperatures. Furthermore, the grease remains pliable and effective even in temperatures as low as -30°C. This product is specifically designed to protect chassis and other heavy-duty applications, such as those found in commercial and agricultural vehicles and heavy equipment. It is suitable for use in wheel bearings and pumps that operate at moderate temperatures.

CATEGORY

- Greases

BENEFITS

- Ensures longer life of bearings
- Excellent resistance to water wash out
- Effective protection against rust, corrosion and oxidation

PROPERTY	METHOD	VALUE
Soap Base		Calcium
Colour		Yellow
Texture		Buttery
NLGI Grade		3
Worked Penetration @ 25°C	ASTM D217	220-250
Dropping Point, °C	ASTM D2265	158
Working Temperature, °C		-30 to +110
