LUBRICANTS

CONDUCTIVE ASSEMBLY PASTE

This product comes in a metallic silver/grey colored paste that contains special pigments and additives formulated to lubricate switchgear and other electrical connections, thereby reducing pitting caused by electrical arcing. This product is an excellent assembly and anti-seize compound that is resistant to both high and low temperatures. Its water-repellent properties prevent moisture ingress, which reduces the risk of corrosion and freezing. This product offers a wide range of thermal and electrical conductivity as well as lubrication. It is ideal for a variety of applications, including switches, circuit breakers, sliding contacts, rotating switches, static grounding, ball and socket connections, earth (grounding) connections, and many others in industries such as smelting, metal processing, and electrical manufacturing.

CATEGORY

- Pastes

BENEFITS

- Improves electrical conductivity
- Good surface wetting
- Water repellent
- Prevents seizure
- Reduces friction and wear
- Improves thermal conductivity
- Resists high temperatures
- Prevents freezing

PROPERTY	METHOD	VALUE
Colour		Silver grey
Thickener		Bentonite
Base oil type		Mineral
Base oil viscosity @ 40 °C, mm ² /s		100
Solids type		Various
Solids content, %		20
Dropping point, °C		300
Service temperatures, °C		-40 - 1100
