WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325300401

## GRINDING AND GENERAL MACHINING SOLUBLE COOLANT

This metalworking fluid is semi-synthetic and creates stable micro-emulsions when blended with water. Its unique bacteriostatic properties provide excellent biological resistance, eliminating the need for biocides or fungicides. Compared to conventional products, this fluid has a longer emulsion lifetime, requiring no additional maintenance costs. Moreover, it poses no negative impact or side effects on operators and protects the machine from rust. This product is versatile and appropriate for various machining operations and grinding on all types of steel and cast iron. It is also compatible with both centralized systems and independent machines.

## CATEGORY

- Metalworking Fluids

## BENEFITS

- High anticorrosive properties
- Good cooling
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
