WATER SOLUBLE METALWORKING FLUIDS (BIOSTABLE)

325301301

BIOSTABLE METALWORKING FLUID FOR STEEL AND CAST IRON

A metalworking fluid that is soluble in water and free from nitrites, secondary amines, and chlorine compounds is offered by this product. It produces milky emulsions with low foam and possesses high cooling and anti-corrosive properties. It is also resistant to microorganisms such as bacteria and fungi, ensuring long fluid life without any unpleasant odors. This product is appropriate for use in all types of operations involving steel and cast iron, and can also be used with certain types of aluminum. It is well-suited for a broad range of machining operations, including grinding where a high-quality finish is desired. Additionally, it can be utilized in various types of CNC, transfer, and metalworking machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- Operator acceptability
- Ideal rationalization product
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
