WATER SOLUBLE METALWORKING FLUIDS (GENERAL MACHINING)

325301401

## SOLUBLE COOLANT FOR GENERAL MACHINING

A new generation, water-soluble neo-synthetic cutting fluid is provided by this product. It forms clear, transparent emulsions with minimal foam and excellent cooling properties. Furthermore, it exhibits impressive resistance to hard water. This fluid also offers good lubricity properties with EP (extreme pressure) characteristics. Depending on the operation, the viscosity can be adjusted through the concentration of polymer, which can provide superior lubricity when necessary. This product is ideal for numerous machining operations and grinding on a wide range of materials, including all grades of steels, aluminum, yellow metals, and cast iron. It is also appropriate for use in both centralized systems and independent machines.

## CATEGORY

- Metalworking Fluids

## BENEFITS

- Transparent emulsion
- Good cooling and anticorrosive properties
- Excellent service life
- Suitable for hard waters
- Environmentally acceptable
- Does not contain boron, nitrite or chlorine
- Does not form sticky deposits on machine surface
- High lubricity and EP features
