

MWF-PLUS WS GEN-GR 51

WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325301501

SOLUBLE COOLANT FOR GRINDING AND GENERAL MACHINING

A water-soluble, neo-synthetic cutting fluid of a new generation is presented with this product. It forms clear, transparent emulsions that exhibit minimal foaming and impressive cooling properties. Additionally, this fluid boasts exceptional resistance to hard water. Due to its unique formulation, it provides excellent biological resistance, eliminating the need to add biocides. This fluid is also safe for workers and effectively protects the machine from rust. This product is appropriate for use in numerous machining operations and grinding on a wide range of materials, including all grades of steel, cast iron, aluminum, and copper.

CATEGORY

- Metalworking Fluids

BENEFITS

- Transparent emulsion
- Excellent cooling and anti corrosive properties
- Hard water resistance
- Environmentally friendly
- Does not contain boron, nitrite or chlorine
- No deposits on machine surfaces
- Good lubricating capacity
- Good EP characteristics
