WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325301601

DYADE
LUBRICANTS

SOLUBLE COOLANT FOR GRINDING AND GENERAL MACHINING

This product is a cutting-edge, water-soluble neo-synthetic cutting fluid that belongs to a new generation of products. It creates clear, transparent emulsions with minimal foaming and exceptional cooling properties, as well as strong resistance to hard water. Due to its unique formulation, it provides excellent biological resistance, eliminating the need to add biocides. Furthermore, this fluid is safe for workers and effectively prevents machine rust. This product is appropriate for use in grinding and numerous machining operations on all grades of steel, including hard steel and cast iron. Additionally, it is suitable for use in both centralized systems and independent machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- Transparent emulsions, allows to see the operation
- Good cooling and anti corrosives properties
- Excellent service life
- Hard water resistance
- Environmentally acceptable
- Does not contain boron, nitrite or chlorine
- Does not form sticky deposits on machine surface
- Good lubricity and MP features
