GENERAL MACHINING METALWORKING FLUID

This high-performance water-soluble cutting fluid is free from nitrites, amines, boron, and chlorine compounds. It creates milky emulsions with low foam and excellent cooling and anticorrosive properties. Additionally, the product includes additives that guarantee superior performance compared to conventional emulsions in terms of tool life and finishing when used in the recommended concentration. This product's microfine emulsion provides effective lubrication and cooling, allowing the fluid to penetrate critical tool/chip interfaces and resulting in superior component finishing and extended tool life. It is compatible with steel, cast iron, brass, aluminum, and copper, making it suitable for a wide range of machining operations such as turning, milling, tapping, boring, reaming, broaching, and threading. The product is also suitable for use with all types of CNC, transfer, and metalworking machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- Operator acceptability
- Ideal rationalization product
- Good service life
- Environmentally acceptable
- Does not contain nitrite, boron, amines or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
- Multi metal
