WATER SOLUBLE METALWORKING FLUIDS (GENERAL MACHINING)

325302101

GENERAL MACHINING SOLUBLE COOLANT

This product is a semi-synthetic metalworking fluid that creates highly stable micro-emulsions when mixed with water. Its unique formulation provides excellent biological resistance, eliminating the need to add biocides or fungicides. This biostatic product has a long lifespan and does not generate additional maintenance costs. It is safe for operators and protects the machine from rust. This product is suitable for a diverse range of machining operations and grinding on all types of steel, cast iron, aluminum, brass, and copper. It is suitable for both centralized systems and independent machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- High anticorrosive properties
- Good cooling
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
- Multi metals
