

MWF-PLUS WS GEN 89

WATER SOLUBLE METALWORKING FLUIDS (GENERAL MACHINING)

325302701

SEMI-SYNTHETIC COOLANT

When mixed with water, this product forms very stable micro emulsions. Its special formulation provides excellent biological resistance, making it unnecessary to add biocides or fungicides. This product is a semi-synthetic metalworking fluid. This semi-synthetic metalworking fluid can be used for various machining operations and grinding on steel, cast iron, and certain types of aluminum and bronze. It is compatible with both centralized systems and independent machines. Additionally, its special formulation provides excellent biological resistance, eliminating the need for biocides or fungicides.

CATEGORY

- Metalworking Fluids

BENEFITS

- High anticorrosive properties
- Good cooling
- Excellent service life
- Environmentally acceptable
- Does not form sticky deposits on machine surface
- Economical in use
