WATER SOLUBLE METALWORKING FLUIDS (GENERAL MACHINING)

325303301

DYADE
LUBRICANTS

HIGH PERFORMANCE WATER SOLUBLE COOLANT

This high-performance water-soluble coolant contains elevated levels of lubricating additives, combined with other multifunctional components to provide biostatic properties. It does not contain nitro sating agents, secondary amines, heavy metals, or chlorine compounds. When mixed with water, it forms milky emulsions with low foam and exceptional cooling and anticorrosive properties. This product is compatible with steel, cast iron, and aluminum alloys and can be used in various machining operations such as turning, milling, tapping, boring, and threading. It is also suitable for grinding operations that require a high-quality finish. The product is compatible with all types of CNC, transfer, and metalworking machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- Operator acceptability
- Ideal rationalization product
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
