WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325303801

GRINDING AND GENERAL MACHINING SOLUBLE LUBRICANT

This semi-synthetic metalworking fluid forms highly stable micro-emulsions when mixed with water. Its unique formulation provides excellent resistance to biocides and fungi, making it a biostatic product with a long lifespan and no additional maintenance costs. The product does not have any adverse effects on operators and effectively protects the machine against rust. The product is appropriate for various machining operations and grinding on steel, brass, aluminum, copper, bronze, and cast iron. It can be used in both centralized systems and independent machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- High anticorrosive properties
- Good cooling
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
- Multi metals
