

MWF-PLUS WS GEN 29

WATER SOLUBLE METALWORKING FLUIDS (GENERAL MACHINING)

325304301

This coolant is designed to deliver exceptional performance and contains high levels of lubricity additives along with other multifunctional components that provide biostatic characteristics. This high-performance coolant contains maximum levels of lubricity additives and other multi-functional components that provide biostatic characteristics. It is suitable for all types of operations on aluminum and ferrous metals, including grinding when a high surface finish is required. The superior lubricity of the product ensures excellent finish and tool life even in arduous machining operations and materials, meeting the exacting demands of modern production engineering techniques.
