WATER SOLUBLE METALWORKING FLUIDS (BIOSTABLE)

325304501

**DYADE**  
LUBRICANTS

## BIOSTABLE METALWORKING FLUID

This is a high-performance water-soluble coolant that contains elevated levels of lubricity additives and other multi-functional components, providing biostatic properties. It does not contain nitro sating agents, secondary amines, heavy metals, or chlorine compounds. When mixed with water, it forms milky emulsions that exhibit low foam, high cooling, and excellent anticorrosive properties. This product is suitable for various machining operations on steel, cast iron, aluminum, brass, and copper, including turning, milling, tapping, boring, and threading. It can also provide a high-quality surface finish when used for grinding operations. It is compatible with all types of CNC, transfer, and metalworking machines.
