WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325304601

## GRINDING AND GENERAL MACHINING SOLUBLE LUBRICANT

The formulation of this soluble metalworking fluid allows it to form highly stable emulsions when combined with water, offering exceptional biological resistance and performance. With biostatic properties and EP additives, the product provides extended fluid life and decreased maintenance expenses. Its usage is safe for operators and helps protect machinery from rust and other detrimental effects. This product is appropriate for a diverse range of machining operations on steel, titanium, aluminum, and aeronautic metals. It can be used with both centralized systems and standalone machines.

## CATEGORY

- Metalworking Fluids

## BENEFITS

- High anticorrosive properties
- Good cooling
- Excellent service life
- Environmentally acceptable
- Good EP properties
- Does not form sticky deposits on machine surface
- Economical in use
- High performance
