WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325304701

## GENERAL MACHINING SOLUBLE LUBRICANT

This semi-synthetic metalworking fluid forms highly stable micro-emulsions when mixed with water. It is free of nitrosating agents, secondary amines, heavy metals, and chlorine compounds, making it a biostable product that achieves a long lifespan without generating additional maintenance costs. The product has no adverse effects on operators and provides machine protection against rust. The product is versatile and can be used for a broad range of machining operations and grinding on various metals, including steel, brass, aluminum, copper, bronze, and cast iron. It is compatible with both centralized systems and standalone machines.

## CATEGORY

- Metalworking Fluids

## BENEFITS

- High anticorrosive properties
- Good cooling properties
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
- Multi-metal suitable
