WATER SOLUBLE METALWORKING FLUIDS (GENERAL-GRINDING)

325305101

GRINDING AND GENERAL MACHINING EP SOLUBLE COOLANT

The special formulation of this semi-synthetic metalworking fluid allows it to form stable micro emulsions when mixed with water, providing great biological stability without the need for biocides or fungicides. It is a biostatic product with EP properties that enhance its longevity and reduce maintenance costs. The product is safe for operators and protects the machine from rust without causing any negative impact. This product is suitable for a wide range of machining operations and grinding on various grades of materials such as steel, brass, aluminum, copper, bronze, and cast iron. Additionally, it can be used in both centralized systems and independent machines.

CATEGORY

- Metalworking Fluids

BENEFITS

- High anticorrosive properties
- Good cooling
- Excellent service life
- Environmentally acceptable
- Good EP properties
- Does not form sticky deposits on machine surface
- Economical in use
- Multi metals
