TRANSFORMER INSULATING OIL

This is a transformer oil that has undergone severe hydro-cracking refining to achieve the highest level of purity and stability. It exhibits superior oxidation stability that meets the high-grade requirements set forth in IEC 60296:2012. With its high dielectric strength, this oil is ideal for equipment that operates at elevated temperatures and requires exceptional oxidation stability. These products are appropriate for use in power transformers, distribution transformers, circuit breakers, oil-filled switches, and X-ray equipment.

CATEGORY

- Industry Specific

BENEFITS

- Very low sulphur
- No DBDS
- High flash point, and consequently low evaporation loss
- Low sludge and acidity formation resulting in a longer equipment and oil life
